INCREASE THE YIELD WITH SURFACTANTS

Surfactants reduce surface tension so that liquid can penetrate the surface of the plant. This helps reduce runoff allowing farmers to use less water on crops, while producing more yield. **aurorium** strives to help our customers in agriculture with responsible and efficient use of resources by helping them transition from synthetic surfactants to the use of nature-based alternatives.

Jarfactant™ Sugar-Based Surfactants perform as well as their synthetic counterparts while being an environmentally friendly option. These alkyl polyglucoside surfactants are non-toxic, and biodegradable. They are derived from responsibly sourced, RSPO-certified palm and palm kernel oil.

We strive to be more than a supplier. We are an experienced and reliable partner with technical and regulatory support worldwide ready to take the next step in responsible agriculture by introducing nature-based surfactants to formulators.
