

PARTNERS IN POSSIBILITY

nature-based leave-on
makeup remover+

customer challenge

- a stubborn lip stain that commercial makeup removers were unable to remove
- zero makeup removers available on the market that were ethoxylate/1,4-dioxane free and silicone-free (that didn't leave a greasy/oily after feel)

solution

- the technical team at **Aurorium** designed a silicone-free, ethoxylate-free, **nature-based leave-on makeup remover** derived from Shea that effectively removed the lip stain and other stubborn color cosmetics; **Jarplex™ MUR**

benefits

- **sustainability, biobased, and waterless beauty**

secondary solution

- developed a clear, homogenous, water soluble microemulsion designed for use in wet wipes that contained the same product in an easy-to-use form; **Jarplex™ M2O**

benefits

- **manufacturing efficiency:** using an alternative platform lowered the customer's formulation cost, production costs, and cycle time (no need for an additional solubilizer and less mixing in production)
